

Product Specifications

Product Name: Transparent pro-environment calcium-zinc stabilizers

Product Aspect: white or yellowish powder

Product Model: RT-600B

Product Features:

- 1.The pro-environment stabilizers own the excellent heat resistance and the thermal stability, and low dosage
- 2.The pro-environment stabilizers own high transparency, and end product will not be mist like
3. The pro-environment stabilizers are odorless, and with good hydrolysis resistance
- 4.The pro-environment stabilizers own excellent initial coloring and long-term weathering resistance.
- 5.The pro-environment stabilizers own excellent antioxidant and anti- patina.
- 6.The pro-environment stabilizers own excellent dynamic processing and can be used widely

Product Usage:

The pro-environment stabilizers are used for pro-environment transparent PVC wire pellets which contact with copper or other metal.

Versatile formula:

PVC	Plasticizer	RT-600B	Lubricant	Epoxidized soybean oil	Application process
100	25PHR above	1~2	Right amount	2	Extrusion

Note: 1. According to the processing machine and formulations, and you should change the lubricant system reasonably, and please use the lubricant with a good transparency. In order to make your products have better quality, please pay attention to the choice of lubricant while using our products. If you need, please contact us.

Standard:

According to the third party international speciation, the product conforms RoHS, PAHs(18 items), Phthalates(21 kinds), PFOS/PFOA, NP, BPA, REACH-SVHC.

Product Storing:

Advice to put the product in dry and draft chamber. Please using up asap once package opened

Product Packaging: 25kg / Package (PE intima bag)
